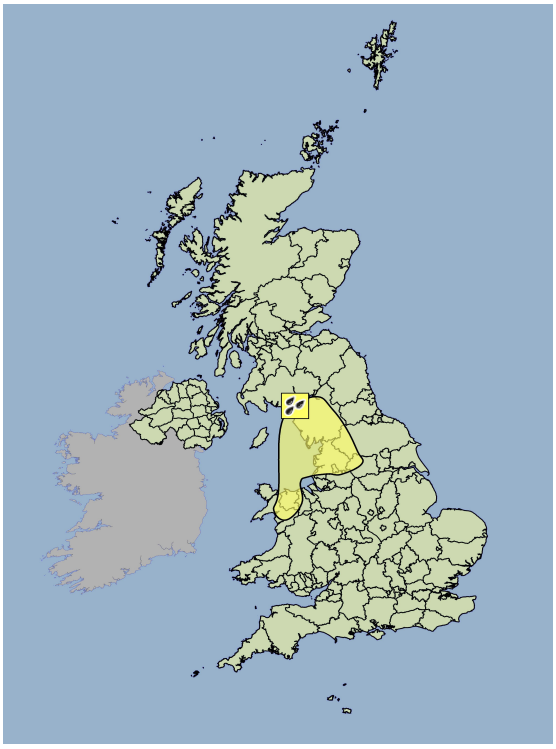
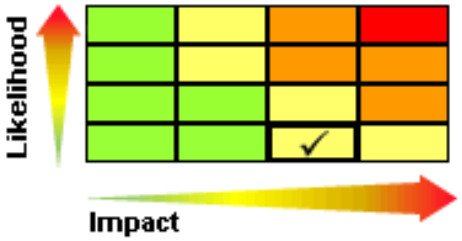
National Severe Weather Warning Service





Chief Forecasters Assessment
Another frontal system is expected to cross the Atlantic and bring a period of heavy rainfall to the UK on Wednesday. Whilst the rainfall accumulations are not unusual for this time of year, 50 mm possible over the high ground of N Wales and NW England, with this following recent wet weather and falling over saturated ground there is the potential for disruption due to flooding.

Winds will also increase with local gales possible, particularly as the rainfall clears and these may continue to increase into Thursday in the northwest. This bring further disruption to the warning area. This warning is likely to be updated in the coming days.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **16:00 on Wed, 18th Nov 2015** until **23:45 on Wed, 18th Nov 2015**

An area of heavy rain is expected to cross the UK from the west on Wednesday. The largest accumulations are expected over the high ground of the country where the ground is saturated following recent periods of heavy rainfall. Along with this winds are expected to increase with a risk of local gales, particularly as the rain clears.

The public should be aware of the potential for further impacts from flooding such as disruption to travel or even property flooding. Some impacts from the increasing winds are also possible. This warning is likely to be updated in the coming days.
